# Study information

## Scientific Title

### Study objectives

Knee partial meniscectomy is one of the most common orthopaedic surgeries. Post-surgical care may or may not include physiotherapy, depending on the surgeon, despite the lack of reports in the literature of clinical trials determining if physiotherapy is effective in cutting costs and restoring function in these patients. The purpose of this research is to determine whether a course of physiotherapy should be included in the early period after knee arthroscopic partial meniscectomy surgery. This analysis will be performed by assessing the cost effectiveness of physiotherapy and the degree to which normal function is restored in the knee after surgery.

### Ethics approval required

Old ethics approval format

### Ethics approval(s)

Not provided at time of registration

### Study design

Randomised controlled trial

### Primary study design

Interventional

### Secondary study design

Randomised controlled trial

### Study setting(s)

Hospital

### Study type(s)

Treatment

### Participant information sheet

### Health condition(s) or problem(s) studied

Musculoskeletal injury; meniscectomy

### Interventions

1. Physiotherapy three times a week for 6 weeks post-surgery
2. No treatment

### Intervention Type

Procedure/Surgery

**Phase**

Not Specified

**Primary outcome measure**

1. Knee function and overall health will be measured over time to determine how these change as a result of treatment. Specifically, these variables will be assessed over time:
  - 1.1. Function of the knee (i.e. motion in the sagittal plane) during level walking and stair climbing
  - 1.2. Scores on the Flandry knee self-assessment questionnaire
  - 1.3. Scores on the SF-36 from the health assessment questionnaire
  - 1.4. Scores on the EuroQol from the health assessment questionnaire
2. In addition, the following will be assessment:
  - 1.1. Time from surgery to return to work
  - 1.2. Estimated level of knee physical stress in job and possible change from pre- to post-surgery
  - 1.3. Total cost of physiotherapy versus non-treatment
  - 1.4. Cost effectiveness of physiotherapy versus non-treatment (cost per QALY gain)

**Secondary outcome measures**

Not provided at time of registration

**Overall study start date**

01/05/1999

**Completion date**

01/05/2001

**Eligibility****Key inclusion criteria**

Patients recently having undergone knee meniscectomy

**Participant type(s)**

Patient

**Age group**

Not Specified

**Sex**

Not Specified

**Target number of participants**

Not provided at time of registration

**Key exclusion criteria**

Does not match inclusion criteria

**Date of first enrolment**

01/05/1999

**Date of final enrolment**

01/05/2001
