Study information

Scientific Title

Study objectives

To investigate whether a modification of the current technique used to exchange central venous catheters results in less contamination.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Surgery

Interventions

Modified techniques vs standard

Added 23/02/2010: PI left and trial did not recruit any participants.

Intervention Type

Procedure/Surgery

Phase

Not Specified

Primary outcome(s)

Outcome measures are bacterial contamination of central venous catheters exchanged by both standard and modified techniques

Key secondary outcome(s))

Not provided at time of registration

Completion date

01/08/2005

Reason abandoned (if study stopped)

Lack of staff/facilities/resources

Eligibility

Key inclusion criteria

General Surgical in-patients in the LGI only

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

Not Specified

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

01/05/2005

Date of final enrolment

01/08/2005
