Study information

Scientific Title

Acronym
RESCINDING

Study objectives
Not provided at time of registration.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration.

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Not Specified

Health condition(s) or problem(s) studied
Cardiovascular disease

Interventions
Nicotine replacement therapy in the form of patches versus placebo

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
Not provided at time of registration.

Key secondary outcome(s))
Not provided at time of registration.

Completion date
30/06/2008

Reason abandoned (if study stopped)
TRIAL TERMINATED BEFORE RECRUITMENT started due to lack of funding

Eligibility

Key inclusion criteria
All smokers (self-report ≥10 cigarettes per day) aged 18 years and over who wish to stop with (at least) one of the following diagnoses:
1. Ischaemic Heart Disease:
i. Stable Angina, clinically or exercise electrocardiogram (ECG) diagnosed
ii. Myocardial infarction more than 2 months previously with recovery uncomplicated by any rhythm disturbances other than atrial fibrillation
2. Cerebrovascular disease: No exclusions
3. Peripheral vascular disease: No exclusions

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Not Specified

Lower age limit
18 years

Sex
Not Specified

Key exclusion criteria
1. Patients the GP, for whatever reason, does not wish to include
2. Known skin hypersensitivity to nicotine, plasters or widespread active eczema/psoriasis or other skin conditions that would restrict patch application
3. Pregnant or breast feeding women or those who are not using reliable contraceptive methods
4. Phaeochromocytoma/Hyperthyroidism and severe renal and/or hepatic impairment
5. Severe (life threatening) arrhythmia
6. Command of English (+/- interpreter) or impairment of faculties does not allow informed consent

Date of first enrolment
01/07/2005

Date of final enrolment
30/06/2008
