Study information

Scientific Title

Acronym

The PD OT Trial

Study objectives

Community occupational therapy has beneficial effects upon functional independence, mobility and quality of life in patients with Parkinson's disease when compared to no occupational therapy intervention

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Parkinson's Disease

Interventions

Occupational therapy compared to no occupational therapy

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Functional ability

Key secondary outcome(s))

1. Mobility
2. Disability
3. Quality of Life

Completion date

30/06/2006

Eligibility

Key inclusion criteria

1. Idiopathic Parkinson's disease (PD) defined by the UK PDS Brain Bank Criteria
2. Patients with more severe PD - those with Hoehn and Yahr stages III and IV

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Key exclusion criteria

1. Dementia (as usually defined by the Investigator) - the patient must be capable of completing self-assessment forms
2. Received occupational therapy in the last 2 years and/or physiotherapy in the last year

Date of first enrolment

01/07/2005

Date of final enrolment

30/06/2006
