Study information

Scientific Title

Study objectives
64 slice CTA is just as good as DSA for the detection of intra cerebral aneurysms and is superior to 16 slice CTA in rsolution and dose to the patient.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Diagnostic

Health condition(s) or problem(s) studied
Subarachnoid haemorrhage

Interventions
64 slice computed tomography angiography (CTA) versus 16 slice CTA versus rotational digital subtraction angiography (DSA)

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
Ability to detect intracranial aneurysms

Key secondary outcome(s))
Radiation dose administered

Completion date
31/12/2006

Eligibility

Key inclusion criteria

All patients admitted with sub-arachnoid haemorrhage to the Neurosurgery department.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
All

Key exclusion criteria
Does not match inclusion criteria

Date of first enrolment
01/10/2005

Date of final enrolment
31/12/2006

Locations

Countries of recruitment
United Kingdom

England

Study participating centre
