Study information

Scientific Title
Efficacy and safety of agomelatine given orally compared to placebo, in addition to a mood stabiliser in bipolar I patients with a current major depressive episode. An eight week randomised, double-blind, controlled, parallel group study followed by a double-blind extension treatment period up to one year

Study objectives
To assess the efficacy of agomelatine compared to placebo in addition to a mood stabiliser in bipolar I patients with a current major depressive episode.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Ramsay Health Ethics Committee, 23/03/2006

Study design
Randomised double-blind placebo-controlled parallel-group study.

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Major depressive episode

Interventions
Agomelatine versus placebo

Intervention Type
Drug

Phase
Not Applicable

Drug/device/biological/vaccine name(s)
Agomelatine

Primary outcome(s)
Montgomery-Asberg Depression Rating Scale (MADRS) questionnaire

Key secondary outcome(s))

Safety of agomelatine in addition to a mood stabiliser

Completion date
31/12/2008

Eligibility

Key inclusion criteria
1. Patients of both genders, over 18 years old
2. Fulfilling The Diagnostic and Statistical Manual of Mental Disorders (DSM-IV-TR) criteria for bipolar I disorder with current major depressive episode
3. Treated with a mood stabiliser

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Lower age limit
18 years

Sex
All

Key exclusion criteria
1. Hepatic or renal failure
2. Abnormal thyroid function
3. Pregnancy
4. Other psychiatric conditions according to DSM-IV TR

Date of first enrolment
18/07/2006

Date of final enrolment
31/12/2008
