# Study information

## Scientific Title

A pilot study to compare the role of antibiotics and topical antiseptics in the treatment of clinically infected eczema

## **Study objectives**

Primary objective: To compare two treatment strategies for the management of clinically infected childhood eczema - the use of oral antibiotics and bathing in potassium permanganate.

## Ethics approval required

Old ethics approval format

## Ethics approval(s)

Not provided at time of registration

## Study design

Randomised controlled trial

## Primary study design

Interventional

# Secondary study design

Randomised controlled trial

## Study setting(s)

Hospital

# Study type(s)

Treatment

## Participant information sheet

# Health condition(s) or problem(s) studied

Atopic dermatitis

### **Interventions**

Questionnaire; Randomised controlled trial. Random allocation to:

- 1. Treatment A oral antibiotics
- 2. Treatment B bathing in potassium permanganate

## Intervention Type

Other

## Phase

**Not Specified** 

## Primary outcome measure

Quality of life during and after the trial measured by the Children's Dermatitis Quality of Life Index

## Secondary outcome measures

Not provided at time of registration

## Overall study start date

01/05/2003

## Completion date

01/11/2003

# Eligibility

## Key inclusion criteria

Patients will be recruited from St James's University Hospital (SJUH) and Leeds General Infirmary (LGI) Outpatients Dermatology Clinic who has infected eczema (age range 3 months to 16 years)

## Participant type(s)

**Patient** 

## Age group

Child

## Lower age limit

3 Months

## Upper age limit

16 Years

### Sex

Both

## Target number of participants

Not provided at time of registration

## Key exclusion criteria

Does not match inclusion criteria

## Date of first enrolment

01/05/2003

## Date of final enrolment

01/11/2003
