Study information

Scientific Title

An investigation into whether tight glucose control improves mortality in patients admitted to combined Intensive Therapy Unit/High Dependency Unit (ITU/HDU)

Study objectives

Does intensive glucose control improve outcome in a population of Intensive Therapy Unit/High Dependency Unit (ITU/HDU) patients?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Not Applicable

Interventions

Group 1: Intensive insulin therapy - the blood glucose will be maintained between 4.4 and 6.1 mmol/L using intravenous insulin therapy

Group 2: Conventional insulin therapy - the blood glucose will be maintained between 10.0 and 11.1 mmol/L using intravenous insulin therapy

Intervention Type

Drug

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Insulin

Primary outcome(s)

Not provided at time of registration

Key secondary outcome(s)

Not provided at time of registration

Completion date

30/06/2005

Eligibility

Key inclusion criteria

ITU/HDU patients

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria
