Participant information sheet

Health condition(s) or problem(s) studied
Myelomatosis

Interventions
All patients receive three courses of chemotherapy with adriamycin, carmustine, melphan and cyclophosphamide (ABCM), cycle to be repeated every 6 weeks. Patients who in whom there are no signs of disease progression and who fulfil all the entry criteria are randomised to one of two treatment regimens:
1. ABCM REGIMEN: Chemotherapy with ABCM, cycle to be repeated every 6 weeks. Treatment is stopped when the patient reaches plateau phase provided they have received at least four courses of ABCM.
2. ORAL C WEEKLY REGIMEN: Oral cyclophosphamide given as a single dose every 7 days plus prednisolone given on alternative days for 6 weeks. Weekly oral cyclophosphamide is continued until the patient reaches plateau phase and has received either three courses of ABCM and a minimum of 8 weeks of oral cyclophosphamide (if less than three courses of ABCM were given, 6 months chemotherapy), there is disease progression or the patient can no longer tolerate treatment.

Intervention Type
Drug

Phase
Not Specified

Drug/device/biological/vaccine name(s)
Adriamycin, carmustine, melphan and cyclophosphamide (ABCM)

Primary outcome measure
Not provided at time of registration

Secondary outcome measures
Not provided at time of registration

Overall study start date
01/11/1993

Completion date
31/12/2002

Eligibility

Key inclusion criteria
1. Patients with definite myelomatosis requiring chemotherapy in the judgement of the physician and fulfilling at least two of the three following criteria: Bone marrow aspirate and/or trephine showing the presence of a neoplastic plasma cell infiltrate and/or microplasmacytomas; A paraprotein present in the blood and/or urine; Definite lytic bone lesions
2. Aged less than 65 years
3. Patients with equivocal myelomatosis are excluded
4. No previous cytotoxic chemotherapy, except prednisolone or other corticosteroids to relieve fluid-unresponsive hypercalcaemia or minimal local radiotherapy to relieve bone pain
5. No medical contraindications to protocol treatments
6. Patients must have a neutrophil count of at least 1.3 x 10E9/l and a platelet count of at least 75 x 10E9/l
7. Patients must be able to tolerate a daily fluid intake of not less than 3 litres, evidence of renal insufficiency following pre-treatment re-hydration does not necessarily exclude
8. Patients must be apyrexial and free from infection

Participant type(s)
