Protocol version 2

Study information

Scientific Title
The Warwick Arthroplasty Trial: a randomised controlled trial of total hip arthroplasty versus resurfacing hip arthroplasty in the treatment of young patients with arthritis of the hip joint

Acronym
WAT

Study objectives
There is no difference in hip function in patients with severe arthritis of the hip joint who have undergone a total hip arthroplasty or a resurfacing arthroplasty at one year post-operation.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Approval received from the Coventry Research Ethics Committee on the 9th May 2007 (ref: 07 /Q2802/26).

Study design
Randomised single blind controlled trial

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Study setting(s)
Hospital

Study type(s)
Treatment

Participant information sheet
Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied
Osteoarthritis of the hip joint

Interventions
1. Patients in the Total Hip Arthroplasty group will have the head of their femur removed and replaced with a prosthetic component fixed inside the femoral shaft
2. Patients in the Hip Resurfacing Arthroplasty group will have a resurfacing cap placed upon their existing femoral head

Both groups will have a new acetabular (socket) component. The details of both operative procedures will be left to the discretion of the surgeon to increase generalisabilty of the result. All patients will receive standardised rehabilitation after the operation. As part of the research patients will be followed-up for one year post-operation.

Joint sponsor of this trial:
University of Warwick (UK)
c/o Donna McIntyre, Grants and Contracts Officer

Intervention Type
Other

Phase
Not Specified

Primary outcome measure
1. Harris Hip Score, measured at pre-operation and 6, 12, 26 and 52 weeks post-operation
2. Oxford Hip Score, measured at pre-operation and 6, 12, 26 and 52 weeks post-operation

Secondary outcome measures
All secondary outcomes will be measured at pre-operation and 6, 12, 26 and 52 weeks post-operation:
1. Disability Rating Index
2. Physical activity level
3. Complication rate
4. Quality of life
5. Health economic evaluation

Overall study start date
01/06/2007

Completion date
31/05/2010

Eligibility

Key inclusion criteria
1. Over the age of 18
2. Able to give informed consent
3. Eligible for hip resurfacing arthroplasty

Participant type(s)
Patient

Age group
Adult

Lower age limit
18 Years

Sex
Both

Target number of participants
172

Total final enrolment
126

Key exclusion criteria
Patients with a concomitant medical problem that will preclude operation.

Date of first enrolment
01/06/2007

Date of final enrolment
31/05/2010
