Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Nervous System Diseases: Alzheimer's disease

Interventions

1. Systematic review of evidence.
2. Recruiting participants through day centres, lunch clubs with specialist provision for dementia.
3. Randomisation of participants.
4. Intervention package, which will involve a stepped care plan using physical, drug, social and psychological interventions.
5. Follow-up, which will be done 3 months post intervention.
6. Data-Analysis will be done on an intent to treat basis and will be achieved by using analysis of co-variance.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Rating of Anxiety in Dementia (RAID), QoL-AD and the General Health Questionnaire (GHQ-12)

Key secondary outcome(s))

Not provided at time of registration

Completion date
