# Study information

Scientific Title

#### **Acronym**

HIPPO (Health Information Project, Presentation Online)

#### **Study objectives**

Our two main comparisons were formulated as the following null-hypotheses:

- 1. The congruence between participants values and their treatment decision is not better for positively framed messages showing gain over 10 years than for negatively framed messages showing loss over 10 years.
- 2. The congruence between participants values and their treatment decision is not better for negatively framed messages showing loss over 10 years than for negatively framed messages showing loss per year over 10 years.

#### Ethics approval required

Old ethics approval format

#### Ethics approval(s)

The University at Buffalo (New York, USA), Health Sciences Institutional Review Board, approved on 15 May 2002.

#### Study design

Randomized controlled trial

#### Primary study design

Interventional

#### Study type(s)

**Not Specified** 

#### Health condition(s) or problem(s) studied

Hypertension (hypothetical scenario)

#### Interventions

Presentation of three statements about the effects of antihypertensives in preventing coronary vascular disease over ten years that are framed differently.

#### Intervention Type

Other

#### Phase

**Not Specified** 

#### Primary outcome(s)

Hypothetical treatment decision: to take or not to take antihypertensives.

#### Key secondary outcome(s))

No secondary outcome measures

#### Completion date

31/05/2005

# **Eligibility**

#### Key inclusion criteria

At least 18 years of age and fluent in Norwegian.

#### Participant type(s)

**Patient** 

#### Healthy volunteers allowed

No

#### Age group

Adult

#### Lower age limit

18 years

#### Sex

**Not Specified** 

#### Key exclusion criteria

Previous participation in this trial.

#### Date of first enrolment

01/11/2004

#### Date of final enrolment

31/05/2005

#### Locations

#### Countries of recruitment

Norway
