Study information

Scientific Title
A blinded randomised controlled trial to assess rapidity, effectiveness, acceptability and safety with intranasal diamorphine compared to oral morphine of analgesia

Study objectives
In children aged between 4-16 years attending Accident and Emergency (A&E) with acute traumatic injury, is there an improvement in safety, speed of onset and efficacy of analgesia, and patient acceptability using intranasal diamorphine compared to Oramorph?

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Single-blinded double dummy randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Signs and Symptoms: Pain

Interventions
Intranasal diamorphine vs oral morphine

Intervention Type
Drug

Phase
Not Applicable

Drug/device/biological/vaccine name(s)
Diamorphine, morphine

Primary outcome(s)
Time to onset of analgesia and efficacy of analgesia.

Key secondary outcome(s))
Not provided at time of registration

Completion date
31/03/2005

Eligibility

Key inclusion criteria
1. Children aged 4-16 years attending the Accident and Emergency (A&E) department
2. With an acute injury who do not need resuscitation
3. Who would normally be offered oral morphine for analgesia

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Child

Lower age limit
4 years

Upper age limit
16 years

Sex
All

Key exclusion criteria
Not provided at time of registration

Date of first enrolment
01/03/2002

Date of final enrolment
31/03/2005
