Plain English summary of protocol

Background and study aims

The aim of this study is to test a school-based, family-involved scheme to promote health behaviours that help to prevent obesity in children aged 10-12 years old across Europe. The scheme, called Up4fun, aims to reduce sitting time in school and at home (with special emphasis on TV and PC/electronic games)

Who can participate?

10-12 year old children at selected schools.

What does the study involve?

Participating schools will be randomly allocated to either the intervention group or the control group. The control group schools were asked to continue with their usual school curriculum. The intervention group schools took part in the Up4fun scheme for 6 weeks in the fall semester of 2011.

The teachers involved will be given training and are requested to spend one school hour (45 minutes) to teach a pre-planned lesson each week for 5 weeks. Weekly newsletters (6 in total) for the parents and pre-planned homework for the children will be handed out by the teacher. The parents will be fully informed about the contents and the aims of the study and will be asked for consent for the participation of their child. The pupils will complete questionnaires about their sedentary (sitting) behaviours, physical activity and dietary habits. Additionally, some of the children's physical activity levels will be measured using accelerometers. The parents will also complete a questionnaire about their own and their child's nutritional and physical activity.

What are the possible benefits and risks of participating?

The scheme may help to reduce the prevalence of obesity and improve public health. No risks are involved, but the questionnaires take time and might be boring to fill out, a few questions might be uncomfortable for some to answer.

Where is the study run from?

The study is run from centres in Belgium, Germany, Greece, Hungary and Norway. The lead centre is University of Agder, Norway. The project leader is based in VU University Medical Center, Amsterdam, the Netherlands.

When is the study starting and how long is it expected to run for?
From September 2011 to run for 6 weeks.

Who is funding the study?
The European Commission.

Who is the main contact?
Amika Singh

Study information

Scientific Title
European ENERGY balance research to prevent excessive weight gain among youth: WP9 evaluating the evidence-based intervention promoting healthy energy balance among 10-12 year olds

Acronym
ENERGY Up4fun

Study objectives
Conduct a process and outcome evaluation of the Up4fun intervention.

Ethics approval required

Health condition(s) or problem(s) studied

Prevention of excessive weight gain by reducing sedentary behaviour

Interventions

The intervention, including about 10 schools (5 intervention schools and 5 control schools) in each of the 5 participating countries primarily aiming at reducing sitting time in school and at home (with special emphasis on television and personal computer (PC)/electronic games), will last for 6 weeks in the fall semester of 2011 in the intervention schools. The teachers involved will be given training (1.5 hours) as week 0 of the intervention, and completed materials to be used are provided by project workers. During the project period teachers are requested to spend one school hour (45 minutes) to teach a pre-planned lesson each week for 5 weeks. Weekly newsletters (6 in total) for the parents and pre-planned homework for the children will be handed out by the teacher.

Intervention Type

Behavioural

Primary outcome measure

Screen time behaviours (TV/DVD watching and computer/games consol usage) measured with frequency questions (hours/day). Measured pre and post intervention.

Secondary outcome measures

1. Determinants of screen time behaviours measured pre and post intervention
2. Sedentary time and breaking up of sedentary time measured with accelerometers measured pre and post intervention

Overall study start date

01/09/2011

Completion date

31/12/2011

Eligibility**Key inclusion criteria**

All school children in two grade levels (age 10-12) in the included schools, and one of their parents

Participant type(s)

Healthy volunteer

Age group

Child

Lower age limit

10 Years

Upper age limit

12 Years

Sex

Both

Target number of participants

2500 pupils and parents

Key exclusion criteria

No parental consent

Date of first enrolment

01/09/2011

Date of final enrolment

31/12/2011
