Study information

Scientific Title

Group vs individual hearing aid fitting a randomised controlled trial

Study objectives

Which are better, group or individual fittings of hearing aids?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Not Specified

Participant information sheet

Health condition(s) or problem(s) studied

Ear, Nose and Throat: Hearing problems

Interventions

Randomised Controlled Trial:

A: group fitting of hearing aids

B: individual fitting of hearing aids

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Glasgow Hearing Aid Benefit Profile (GHABP)

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/11/2005

Completion date

01/11/2007

Eligibility

Key inclusion criteria

100 participants having hearing aids fitted. 50 in a group setting, 50 individually.

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

100

Key exclusion criteria

Patients who are not suitable for a group fitting eg with poor manual dexterity, poor eye sight, learning difficulties or poor English skills.

Date of first enrolment

01/11/2005

Date of final enrolment

01/11/2007

Locations

Countries of recruitment

England

United Kingdom
