Study information

Scientific Title

The Effects of the Dutch national guideline on the management of employees with mental health problems by occupational physicians.

Study objectives

Treatment according to the Dutch National Guideline on the Management of Employees with Mental Health Problems by Occupational Physicians will cause less work disability than treatment according to usual care, with minimal involvement of the occupational physician and frequent referral to a psychologist.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethics approval received from the local medical ethics committee

Study design

Randomised, single blinded, active controlled, parallel group trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Mental health problems

Interventions

Treatment according to the Dutch national guideline on the management of employees with mental health problems by occupational physicians. This guideline focuses on four aspects of the management of mental health problems:

1. The occupational physician acknowledges the interaction between the disabled employee and his surroundings (work, personal and care)
2. A simplified classification of mental health problems is introduced, with only four categories
3. The occupational physician acts as case manager, who intervenes when recovery stagnates
4. Finally, the occupational physician may also act as care manager by counseling employees with work related problems

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Return to work.

Key secondary outcome(s))

1. Patient satisfaction
2. Satisfaction of the employer
3. Evaluation of the occupational physician
4. Cost benefits

Completion date

01/01/2006

Eligibility

Key inclusion criteria

1. Physical or mental health symptoms which cause suffering or malfunctioning for the patient
2. Disability to work on the moment of inclusion by the occupational physician

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria

1. Symptoms are caused by a physical disorder
2. Disagreement about the diagnosis by the occupational physician and the patient
3. Mistrust between occupational physician and patient
4. Earlier inclusion in the study

Date of first enrolment

01/01/2002

Date of final enrolment

01/01/2006
