Study information

Scientific Title
Effects of a Mediterranean diet enriched with virgin olive oil or mixed nuts versus a low fat diet on the primary prevention of cardiovascular disease: a randomised controlled trial

Acronym

PREDIMED

Study objectives

A Mediterranean-style diet enriched with virgin olive oil or mixed nuts prevents cardiovascular events (cardiovascular death, non-fatal myocardial infarction, or non-fatal stroke).

Ethics approval required

Old ethics approval format

Ethics approval(s)

Institutional Review Board of the Hospital Clinic at Barcelona, Spain, 16/07/2002

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Prevention

Health condition(s) or problem(s) studied

Cardiovascular disease

Interventions

Participants are randomly assigned into three equal groups:

1. Mediterranean-style diet with added virgin olive oil
2. Mediterranean-style diet with added nuts
3. Low-fat diet according to American Heart Association guidelines

Added 07/05/2009:

All participants in the three arms will be treated and followed-up yearly from their inclusion to the second semester of 2011.

Intervention Type

Other

Primary outcome(s)

A composite endpoint of cardiovascular death, non-fatal myocardial infarction, and non-fatal stroke.

Added 07/05/2009:

All participants are evaluated yearly for primary and secondary endpoints.

Key secondary outcome(s)

Death of any cause and incidence of angina leading to a revascularisation procedure, heart failure, diabetes mellitus, dementia, and cancer.

Other outcomes:

1. Changes in blood pressure
2. Body weight
3. Adiposity measures
4. Blood sugar
5. Lipid profile
6. Markers of inflammation
7. Other intermediate markers of cardiovascular risk

Added 07/05/2009:

All participants are evaluated yearly for primary and secondary endpoints.

Completion date

31/12/2011

Eligibility

Key inclusion criteria

Participants are community-dwelling high-risk persons aged 55 to 80 for men and aged 60 to 80 for women, without a history of cardiovascular disease (CHD), who fulfill at least one of the two following criteria:

1. Type 2 diabetes
2. Three or more of the risk factors:
 - 2.1. Current smoker
 - 2.2. Hypertension
 - 2.3. Hypercholesterolemia (low density lipoprotein cholesterol [LDL-cholesterol] more than 160 mg/dl or treatment with hypolipidemic drugs)
 - 2.4. High density lipoprotein cholesterol (HDL-cholesterol) less than 40 mg/dl
 - 2.5. Overweight or obesity (body mass index more than 25 kg/m²)
 - 2.6. Family history of premature CHD

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Mixed

Lower age limit

55 years

Upper age limit

80 years

Sex

All

Total final enrolment

7447

Key exclusion criteria

1. Previous history of cardiovascular disease
2. Any severe chronic illness
3. Immunodeficiency or human immunodeficiency virus (HIV) positive status
4. Illegal drug use or chronic alcoholism
5. History of allergy to olive oil or nuts
6. Low predicted likelihood of changing dietary habits according to the Prochaska and DiClemente stages of change model

Date of first enrolment

01/10/2003

Date of final enrolment

31/12/2011
