Study information

Scientific Title

Study objectives
The use of Gelclair in the management of patients with radiotherapy induced mucositis, will significantly reduced levels of intro-oral pain and consequently improve the patients' ability to eat and drink

Ethics approval required
Old ethics approval format

Ethics approval(s)

Study design
Double centre randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Radiotherapy induced mucositis

Interventions
Randomised controlled trial. A sample of patients who are due to receive radiotherapy to the Head and Neck and who would normally be expected to develop oral mucositis will be approached for recruitment into the study. 20 Subjects from the Royal Devon & Exeter (RD&E) Healthcare Trust and South Devon Healthcare Trust, who fit the criteria for the study, will be selected and then randomly assigned to one of two treatment arms. The treatment groups will receive Gelclair plus standard therapy and the control groups will receive standard therapy alone. A baseline questionnaire will be completed before the patient starts taking their treatment regime and then subsequently re-completed at 1 hour, 3 hours and 24 hours. The independent variables to be measured will be A. Standard Therapy, B Gelclair. The dependent variables to be measured will be A. Patients pain levels at baseline, 1, 3 and 24 hours respectively, B. Patients ability to eat and drink at baseline, 1, 3, & 24 hours respectively.

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
This study aims to evaluate short-term symptom control offered by Standard Therapy vs Gelclair, in patients suffering from radiotherapy-induced oral mucositis. Due to the escalating nature of this condition, the trial will be conducted over a period of 24 hours only.
Study endpoints: Comparing
1. Patients' inability to eat and drink
2. Pain levels
In control and treatment groups

Key secondary outcome(s))
Not provided at time of registration

Completion date
30/09/2004

Eligibility

Key inclusion criteria
A sample of patients who are due to receive radiotherapy to the Head and Neck and who would normally be expected to develop oral mucositis, will be approached for recruitment into the study. 20 subjects from the RD&E Healthcare Trust and South Devon Healthcare Trust, who fit the criteria for the study, will be selected and then randomly assigned to one of two treatment arms.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
All

Key exclusion criteria
Those unable to give informed consent, patients who are known to be allergic to any of the constituents of Gelclair or standard therapy, those under the age of 18 years.

Date of first enrolment
01/03/2004

Date of final enrolment
30/09/2004
