Study information

Scientific Title

Acceptability, effectiveness and cost-effectiveness of intermediate care for stroke patients in a rural population, pragmatic randomised trial

Study objectives

Will intermediate care teams achieve patient outcomes as good as those of conventional care for stroke patients in our population?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Stroke

Interventions

Pragmatic randomised trial - To use block randomisation with each group with similar severity.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

1. Physical Component Summary
2. Summaries of the Medical Outcomes study - short form 36 (SF36)

Secondary outcome measures

There are several secondary outcomes

Overall study start date

01/05/2002

Completion date

01/12/2005

Eligibility

Key inclusion criteria

Stroke patients at WCH with a diagnosis of stroke

Participant type(s)

Patient

Age group

Senior

Sex

Both

Target number of participants

160 (80 in Research Group and 80 in Control Group)

Key exclusion criteria

Admitted from residential homes

Date of first enrolment

01/05/2002

Date of final enrolment

01/12/2005

Locations

Countries of recruitment

England

United Kingdom

Study participating centre
