Study information

Scientific Title

Advice on welfare rights for disadvantaged older people recruited via primary health care

Study objectives

Older people in poor health are more likely to need extra money, aids and adaptations to allow them to stay in their homes, yet many do not claim the benefits to which they are entitled. This study will evaluate the effects on health and well-being of a welfare rights advice service provided by social services departments in North East England for low income older people, who we will identify from general practices.

Primary Care Research Network for England

Interventions

750 older people who volunteer to take part will be assigned, by chance, to one of two groups. The 375 older people in one group will be given an appointment with a welfare rights advisor within 2 weeks in their own home, during which they will receive a full benefit assessment and help with claiming benefits and other entitlements. Advisors will keep in touch with them until

they no longer need help. The 375 older people in the other group will receive exactly the same help and advice 24 months later and receive usual care in the meantime. Older people in both groups will be interviewed at the outset and after 24 months to find out whether the service has had beneficial or other effects and whether it is acceptable. We will also assess whether the service offers good value for money and is acceptable to professionals. Older people in both groups will be free to seek advice independently or to leave the study at any time.

Wait list control, 'Usual care', including voluntary access to available welfare rights services until 24 months follow up, when the trial intervention will be offered.

Welfare advice, Welfare advice consultations and active assistance with benefit claims delivered in participants' own homes by a trained welfare rights advisor (WRA)

Intervention Type

Other

Phase

Not Applicable

Primary outcome measure

Quality of life (CASP 19) measured at baseline, 12 months, 24 months

Secondary outcome measures

1. Health status (Euroqol EQ5D)
2. Functional ability (ADLs/IADLs)
3. Independence (living independently, with carer support, in own home or a relations, care home or hospital)
4. Social support/participation (Social Support Questionnaire)
5. Depression (PHQ-9)
6. Mortality
7. Key health related behaviours (diet, physical activity, alcohol, smoking)
8. Perceived financial well-being (Affordability Index)
9. Fuel poverty (achievement of household temperature sufficient to maintain health for expenditure of <10% of household income).

Overall study start date

01/12/2011

Completion date

31/05/2015

Eligibility

Key inclusion criteria

1. Volunteer men and women registered with a General Practice in one of 10 social services areas (1 individual per household)
2. Aged 60 years and over
3. Providing informed consent

Participant type(s)

Patient

Age group

Adult

Sex

Both

Target number of participants

UK Sample Size: 750

Key exclusion criteria

1. Patients resident in nursing homes or hospitals at the time of identification
2. Diagnosed terminal illness
3. By virtue of current physical/mental health cannot participate in the research
4. Lack of fluency in written and spoken English

Date of first enrolment

01/12/2011

Date of final enrolment

31/05/2015
