# Study information

## Scientific Title

DTO-FTO trial: Small group quality improvement on prescribing and test ordering performance of general practitioners: a large scale implementation study in the South of the Netherlands

## Study objectives

This strategy will improve the number of tests ordered or the volume of prescribed drugs by 20% and decrease the inter-doctor variation.

## Ethics approval required

Old ethics approval format

## Ethics approval(s)

Ethics Board of the academic hospital Maastricht (azM)/Maastricht University (UM), 24/08/2006, ref: MEC 06-4-033

## Study design

Multicentre cluster-randomised active-controlled parallel-group trial

## Primary study design

Interventional

## Study type(s)

Treatment

## Health condition(s) or problem(s) studied

Prescribing and test ordering performance of general practitioners

## Interventions

All participating GP's receive feedback on their own test ordering and prescribing performance in the foregoing six months on a predefined clinical topic. The graphical comparative feedback is send to each GP individually together with an outline of current guidelines on the topic, prior to the group meeting. The feedback will lead to peer review, seeking and discussing explanations for differences, comparing own performance to the guidelines, discussing a plan for change and discussing barriers to change. Each group discusses three clinical topics in six sessions. If the group wishes to do so, two sessions (test ordering and prescribing) can be combined into one session.

The intervention will run from September 2007 through February 2009. Please note that as of 05/10/2007, the anticipated start date of this trial was postponed from September 2007 to December 2007.

## Intervention Type

Other

## Phase

Not Specified

## Primary outcome(s)

1. The volume of ordered diagnostic tests and of prescribed medication
2. The inter-doctor variation in both test ordering and prescribing

Outcomes are measured at start of study (baseline), each 6 months preliminary data, after 18 months main timepoint for effect measurement, 6 and 12 months later long term effect measurement.

### **Key secondary outcome(s)**

1. The quality of prescribing as defined by indicators
2. The level of functioning of the groups
3. What are the costs of implementation of the strategy?
4. Process data (attendance, altering of the meeting structure etc.)

Outcomes are measured at start of study (baseline), each 6 months preliminary data, after 18 months main timepoint for effect measurement, 6 and 12 months later long term effect measurement.

### **Completion date**

01/02/2010

## **Eligibility**

### **Key inclusion criteria**

Groups of General Practitioners (GPs) conjoint in pharmacotherapeutic audit groups.

### **Participant type(s)**

Health professional

### **Healthy volunteers allowed**

No

### **Age group**

Adult

### **Sex**

All

### **Key exclusion criteria**

1. Groups of over 15 GP's
2. Groups outside the provinces: Zeeland, Brabant or Limburg

### **Date of first enrolment**

01/12/2007

### **Date of final enrolment**

01/02/2010

## **Locations**

### **Countries of recruitment**

Netherlands

**Study participating centre**

**Maastricht University**

Maastricht

Netherlands

6200 MD

## Sponsor information

**Organisation**

University Maastricht (UM) (Netherlands)

**ROR**
