Study information

Scientific Title

Randomised trial of a computer software package to improve numeracy skills among nursing students

Study objectives

The principle research question is whether the use of a supplementary computer based numeracy training programme increases numeracy skills among first year nursing students.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Health Sciences Research Governance Committee, University of York. Date of approval: 10/12 /2007

Study design

Randomised, single-centre trial.

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Not Specified

Participant information sheet

Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied

Numeracy skills of student nurses

Interventions

The intervention is a computer software package known as Authentic World which can be accessed online, participants in the intervention group will be sent details on how to access the computer software and will be able to access the software until the routine end of year numeracy testing. Participants in the control group will receive usual numeracy support. Participants in the intervention and control group will be given reminder information on how to access usual numeracy support from Departmental Staff.

Duration of intervention: 6 months (April - Oct 2008)

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Students score on the end of year numeracy test (VLE) plus six additional questions relating specifically to medication dosage calculations, at 6 months from the beginning of the intervention.

Secondary outcome measures

No secondary outcome measures

Overall study start date

26/02/2008

Completion date

10/10/2008

Eligibility

Key inclusion criteria

First year nursing or midwifery students at the University of York.

Participant type(s)

Patient

Age group

Adult

Sex

Both

Target number of participants

138

Key exclusion criteria

1. Refusal to give consent
2. Term 1 diagnostic numeracy test score unavailable
