### Plain English summary of protocol

Background and study aims

Astigmatism is a common eye problem that can make vision blurry or distorted. People with astigmatism can be corrected with spectacles or contact lenses. When corrected with spectacles any level of astigmatism present is always corrected. In contrast, when corrected with contact lenses low level of astigmatism is usually not corrected in routine practice. A number of studies have suggested that this approach may produce less than optimal vision in particular at night. The aim of this study is to demonstrate that low astigmatic contact lens wearers could benefit from using toric contact lenses (contact lenses that correct astigmatism) instead of standard spherical contact lenses.

## Who can participate?

Adults aged 18 to 35 years who are current soft contact lens wearers and have low levels of astigmatism

#### What does the study involve?

Participants will attend the clinic on three separate occasions approximately one week apart. Two different contact lenses will be dispensed at the first two visits and to be worn for about a week. At visits 2 and 3 the acceptance will be assessed by the investigators.

What are the possible benefits and risks of participating?

Participants have the opportunity to try contact lenses to correct their astigmatism. Any contact lens wear comes at the risk of corneal infection, but the incidence rate is very low.

Where is the study run from?

Ocular Technology Group - International (OTG-i) (UK)

When is the study starting and how long is it expected to run for? April 2023 to June 2024

Who is funding the study? CooperVision International Limited (UK)

Who is the main contact?

Deborah Moore, dmoore@otg.co.uk

CV23-42 ID23-35, IRAS 331203

# Study information

#### Scientific Title

Correction of low level of astigmatism with soft contact lenses

## Study objectives

The primary hypothesis to be tested is that the visual acuity under mesopic light conditions with the test toric contact lens is superior to that with the control spherical contact lens.

The secondary hypotheses to be tested are that:

- 1. Night-time vision satisfaction with the test toric contact lens is superior to that with the control spherical contact lens
- 2. Visual acuity in the presence of glare with the test toric contact lens is superior to that with the control spherical contact lens

approved 31/08/2023, North Of Scotland Ethics Committee 02 (Summerfield House, 2 Eday Road, Aberdeen, AB15 6RE, United Kingdom; +44 (0)1224558458; gram.nosres@nhs.scot), ref: 23 /NS/0081

### Study design

Single-centre prospective interventional double-masked cross-over randomized trial

### Primary study design

Interventional

## Study type(s)

**Efficacy** 

## Health condition(s) or problem(s) studied

**Astigmatism** 

#### **Interventions**

Two types of contact lenses (MyDay Toric®, MyDay® spherical) will be worn by each participant in a random order in turn for at least 7 days (7 -0./+3 days) on a daily disposable basis. Randomisation is carried out by a standard computer randomisation generator software. Each participant attends the clinic on three occasions: the first visit for enrolment, screening and contact lens order 1 dispensing, visit 2 for contact lens order 1 follow-up and contact lens order 2 dispensing, and visit 3 for contact lens order 2 follow-up and discharge.

#### Intervention Type

Device

#### Phase

Phase IV

# Drug/device/biological/vaccine name(s)

MyDay Toric®, MyDay® spherical

## Primary outcome(s)

Timed monocular logMAR high contrast (>90%), mesopic (2.5 cd/m2) visual acuity measured at the follow-up visits at 7 (+3/-0), 14 (+3/-0) and 21 (+3/-0) days

# Key secondary outcome(s))

- 1. Overall night-time vision satisfaction recorded on a 100-point VAS measured at the follow-up visits at 7 (+3/-0), 14 (+3/-0) and 21 (+3/-0) days
- 2. Timed monocular logMAR medium contrast, mesopic (2.5 cd/m2) visual acuity loss with the addition of a glare source measured at the follow-up visits at 7 (+3/-0), 14 (+3/-0) and 21 (+3/-0) days

## Completion date

01/06/2024

# **Eligibility**

## Key inclusion criteria

In order to be enrolled, each participant shall meet the following criteria:

- 1. Aged 18 to 35 years
- 2. Current contact lens wearer
- 3. Spectacle refraction:

Distance: Sphere: -6.00D to + 2.00D

Astigmatism: -0.50D to -1.00D with at least -0.75D in one eye 4. Best corrected visual acuity of at least 20/25 in each eye

#### Participant type(s)

Patient

### Healthy volunteers allowed

No

#### Age group

Adult

#### Lower age limit

18 years

### Upper age limit

35 years

#### Sex

Αll

#### Total final enrolment

25

#### Key exclusion criteria

- Acute and subacute inflammation or infection of the anterior chamber of the eye
- 2. Any eye disease, injury or abnormality that affects the cornea, conjunctiva or eyelids that would contraindicate contact lens wear
- 3. Corneal hypoesthesia (reduced corneal sensitivity), if not aphakic
- 4. Severe insufficiency of lacrimal secretion (dry eyes)
- 5. Any systemic disease that may affect the eye or may be exaggerated by wearing contact lenses (e.g. acne and eczema)
- 6. Allergic reactions of ocular surfaces or adnexa that may be induced or exaggerated by wearing contact lenses or use of contact lens solutions
- 7. Any active corneal infection (bacterial, fungal, protozoal or viral)
- 8. Newly prescribed (within the past 30 days) use of some systemic medications (such as antihistamines, decongestants, diuretics, muscle relaxants, tranquilizers, stimulants, antidepressants, anti-psychotics, oral contraceptives) or new prescription eyedrops which is not rewetting/lubricating eyedrops for which contact lens wear could be contraindicated as determined by the investigator
- 9. Monocular participants (only one eye with functional vision) or participants fit with only one contact lens
- 10. Subjects with slit lamp findings greater than grade 1 (e.g. edema, infiltrates, corneal neovascularization, corneal staining, tarsal abnormalities, conjunctival, anterior segment inflammation) as per ISO 11980, any previous history or signs of a contact lens related corneal inflammatory event (past corneal ulcers), or any other ocular abnormality that may

contraindicate contact lens wear at the enrolment visit

- 11. History of corneal refractive surgery
- 12. Enrolment of the family members of the investigator, family members of the investigator's staff, or individuals living in the households of these individuals
- 13. Current wearer of the control contact lenses MyDay® spherical or the test contact lenses MyDay Toric®

#### Date of first enrolment
