Study information

Scientific Title
A randomised trial using Zero-Balanced Ultrafiltration in Cardiopulmonary bypass

Study objectives
To show whether a modified method of ultrafiltration, known as Zero-balance ultrafiltration (ZBUF) is effective in reducing free-radical production during cardiac surgery in adults. A reduction in free radical generation will help protect cell membranes

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Cardiovascular surgery

Interventions
Clinical Study|Human Physiology|Inpatient Admission|Multicentre Study: National|NHS Patients|Study of Non-Therapeutic Procedure

Intervention Type
Procedure/Surgery

Phase
Not Specified

Primary outcome(s)
To establish the effects of Zero-balanced Ultrafiltration with patients in cardiopulmonary bypass

Key secondary outcome(s))
Not provided at time of registration

Completion date
01/06/2005

Eligibility

Key inclusion criteria
1. Less than 75 years of age
2. Left ventricular function less than 50%
3. Pre-operative haematocrit greater than 30%.

Participant type(s)

Patient

Healthy volunteers allowed
No

Age group
Other

Sex
All

Key exclusion criteria
Does not match inclusion criteria

Date of first enrolment
01/08/2003

Date of final enrolment
01/06/2005

Locations

Countries of recruitment
United Kingdom

England

Study participating centre
University Hospitals of Leicester
Leicester
United Kingdom
LE1 4PW
