# Study information

## Scientific Title

The influence of incentives on children's consumption of vegetables: a randomised controlled multi-centre trial

## Study objectives

1. In children, are verbal rewards more effective than tangible rewards for increasing consumption of a target food, and for persistent changes in liking?
2. To what extent are the known benefits of mere exposure dependent on verbal rewards?

## Ethics approval required

Old ethics approval format

## Ethics approval(s)

University College London (UCL) Research Ethics Committee, approved on 28/11/2008 (ref: 1715 /001)

## Study design

Randomised controlled multi-centre trial

## Primary study design

Interventional

## Secondary study design

Randomised controlled trial

## Health condition(s) or problem(s) studied

Children's nutrition

## Interventions

Classes will be randomly assigned to one of four experimental conditions. All children will participate in a pre-intervention taste test at which a target vegetable will be identified for each child.

Four conditions are:

Control: The children will not be required to taste their target vegetable during the training stage, with no testing taking place between pre and post tests.

No reward (exposure) condition: The children will be asked to taste their target vegetable once daily for 13 school days. These tasting sessions will not be rewarded.

Immediate tangible reward condition: The children will be asked to taste their target vegetable once daily for 13 school days. This group will immediately receive a tangible reward (one sticker of their choice) for tasting their target vegetable.

Immediate verbal reward condition: The children will be asked to taste their target vegetable once daily for 13 school days. This group will immediately be praised for tasting their target vegetable.

### **Intervention Type**

### **Phase**

Not Applicable

### **Primary outcome measure**

The following will be assessed at a post-intervention taste test and 1 and 3 months post-intervention:

1. Children's liking (faces scale: "Yucky" = 1, "OK" = 2, "Yummy" = 3)
2. Ranking: Forced choice ranking of target vegetable from 1 (most liked) to 6 (least liked)
3. Consumption (g) of a target vegetable

### **Secondary outcome measures**

Liking and frequency of consumption of a range of vegetables as reported by a parent using food frequency and food preference questionnaires at baseline and both follow-ups (1 month and 3 months post-intervention).

### **Overall study start date**

01/11/2008

### **Completion date**

15/09/2009

## **Eligibility**

### **Key inclusion criteria**

Children (both males and females) in Reception and Year 1 classes in primary schools

### **Participant type(s)**

Patient

### **Age group**

Child

### **Sex**

Both

### **Target number of participants**

**Key exclusion criteria**

Significant learning difficulties or insufficient command on English language to participate in tasting sessions.

**Date of first enrolment**

01/11/2008

**Date of final enrolment**

15/09/2009
