Study information

Scientific Title

An evaluation of a brief assessment-led intervention with young non-injecting drug users

Study objectives

That participants receiving a brief assessment-led intervention would at 3 months follow-up have a lower mean frequency of cannabis use, cocaine use, crack cocaine use and MDMA (3,4 methylenedioxymethamphetamine; Ecstasy) use combined than delayed assessment control participants

Ethics approval required

Old ethics approval format

Ethics approval(s)

King's College London, 17/10/2005, ref: 05/Q0706/219

Health condition(s) or problem(s) studied

Substance misuse

Interventions

Experimental: A brief assessment-led intervention

a. Drugs and Lifestyle Assessment

b. Manual guided 30 minute feedback interview

Control 1: Assessment only

Control 2: Delayed assessment

Intervention Type

Behavioural

Primary outcome measure

Combined frequency of cocaine powder use, crack cocaine use, MDMA use and cannabis use, assessed at baseline and 90 days

Secondary outcome measures

The following were assessed at baseline and 90 days:

1. Typical intensity of cannabis use, cocaine use, crack cocaine use and MDMA use at 90 days
2. Drug dependency: Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders, 4th edition (DSM-IV) Personality Disorders (Structured Clinical Interview for DSM-IV Axis II Personality Disorders; SCID-II)
3. Alcohol frequency and intensity
4. Hazardous drinking: The Alcohol Use Disorders Identification Test (AUDIT)
5. General health: EQ-5D A multi-dimensional Quality of Health Instrument (EurQol)
6. Psychological health: General Health Questionnaire (GHQ 12)
7. Engagement with health and social services

Overall study start date

01/10/2005

Completion date

29/01/2008

Eligibility

Key inclusion criteria

1. 16 to 28 years old
2. Using either cannabis, cocaine powder, crack cocaine, or MDMA on four days in previous month
3. Able speak and comprehend English
4. Written consent

Participant type(s)

Other

Age group

Adult

Sex

Both

Target number of participants

255

Total final enrolment

342

Key exclusion criteria

1. In contact with a drug/alcohol treatment agency in previous 12 months
2. Used opiates more than 30 days in the previous 90 days or in the previous 48 hours before

interview

3. Injected more than once in the last 12 months and no more than ten times lifetime

4. Receiving specialist treatment for a mental health problem

5. Participated in a similar research study in the previous 12 months

Date of first enrolment

01/10/2005

Date of final enrolment

29/01/2008
