The aim of nding -posture BIA system to see whether it can
Who can participate? Healthy Taiwanese adults with normal physical activity		
What does the study involve? The abdominal visceral fat area measured using BIA is compared with the area measured using an abdominal computerized tomography (CT) scan.		
-	ole benefits and risks of ants are exposure to ra	participating? diation during the CT scan, but this is a safe and legal
Where is the study run from? Dali Jen-Ai Hospital (China)		
When is the study starting and how long is it expected to run for? January 2008 to December 2013		
Who is funding the study? National Science Council of the Republic of China (China)		

Who is the main contact? Dr Kuen-Chang Hsieh

Study information

Scientific Title

Using computerized tomography to evaluate the foot-to-foot standing bioelectrical impedance analysis device to measure the abdominal visceral fat area

Study objectives

The newly developed standing-posture bioelectrical impedance analysis (BIA) system with four-contact electrodes can measure abdominal visceral fat area with accuracy.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Health condition(s) or problem(s) studied

Abdominal visceral fat measurement in healthy volunteers

Interventions

- 1. Abdominal VFA measurements using a standing BIA system
- 2. Abdominal VFA measurements using abdominal computerized tomography (CT) scanned at the L4-L5 level

Both of these two measurements were performed subsequently at the same condition.

Intervention Type

Device

Phase

Not Applicable

Primary outcome measure

Abdominal VFA measurements obtained using abdominal computerized tomography (CT) scanned at the L4-L5 level

Secondary outcome measures

Abdominal VFA measurements obtained using a standing BIA system

Overall study start date

01/01/2008

Completion date

31/12/2013

Eligibility

Key inclusion criteria

Healthy subjects with normal physical activity were selected in Taiwan

Participant type(s)

Patient

Age group

Adult

Sex

Both

Target number of participants

116 females and 154 males

Key exclusion criteria

- 1. The participants had no major diseases, such as diabetes, cancer, kidney dysfunction, liver diseases or long-term asthma
- 2. Pregnant women or women who were likely to become pregnant, menstruating women
- 3. Individuals with electronic implants (electronic devices attached to the body)

Date of first enrolment

01/01/2008

Date of final enrolment

31/12/2013
