Study information

Scientific Title

Study objectives

Does using a 'temporary tattoo' of the Wong-Baker faces scale applied to the skin of children improve postoperative pain assessment and treatment compared with a paper version of the scale?

Ethics approval required

Old ethics approval format

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Signs and Symptoms: Pain

Interventions

Temporary tattoo of a pain intensity scale (TTPS) vs paper version of the pain scale (PPS)

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Frequency of pain assessment documentation, use of pain treatments and patient/parent satisfaction with pain care.

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/09/2001

Completion date

31/08/2003

Eligibility

Key inclusion criteria

Children having surgery.

Participant type(s)

Patient

Age group

Child
