Study information

Scientific Title

Study objectives

Does using a 'temporary tattoo' of the Wong-Baker faces scale applied to the skin of children improve postoperative pain assessment and treatment compared with a paper version of the scale?

Ethics approval required Old ethics approval format

Ethics approval(s) Not provided at time of registration

Study design Randomised controlled trial

Primary study design Interventional

Secondary study design Randomised controlled trial

Study setting(s) Not specified

Study type(s) Treatment

Participant information sheet

Health condition(s) or problem(s) studied Signs and Symptoms: Pain

Interventions Temporary tattoo of a pain intensity scale (TTPS) vs paper version of the pain scale (PPS)

Intervention Type Other

Phase Not Specified

Primary outcome measure

Frequency of pain assessment documentation, use of pain treatments and patient/parent satisfaction with pain care.

Secondary outcome measures Not provided at time of registration

Overall study start date 01/09/2001

Completion date 31/08/2003

Eligibility

Key inclusion criteria Children having surgery.

Participant type(s) Patient

Age group Child

Sex Not Specified

Target number of participants Not provided at time of registration

Key exclusion criteria Not provided at time of registration

Date of first enrolment 01/09/2001

Date of final enrolment 31/08/2003
