Study information

Scientific Title

Study objectives

A comparison of two epidural infusion doses for post-operative pain relief and to explore the experience of patients who have undergone epidural pain management.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Signs and Symptoms: Post operative pain

Interventions

Randomised controlled trial and telephone interviews for patient centered phase

Intervention Type

Procedure/Surgery

Phase

Not Specified

Primary outcome(s)

Pain relief response to therapy

Key secondary outcome(s)

Not provided at time of registration

Completion date

30/05/2003

Eligibility

Key inclusion criteria

86 patients undergoing major abdominal surgery nursed with epidural for postoperative pain relief, randomised to two groups

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Total final enrolment

100

Key exclusion criteria

Does not meet inclusion criteria

Date of first enrolment

31/05/2002

Date of final enrolment

30/05/2003
