Study information

Scientific Title

The feasibility of a personalised, distance-based lifestyle intervention in colorectal cancer (CRC) patients who have recently completed treatment, focusing on increasing fruit and vegetable (F&V) intake, reducing red and processed meat consumption, and increasing physical activity

Study objectives

This is a pilot study to examine the feasibility and acceptability of a distance-based intervention to increase physical activity and fruit and vegetable consumption and reduce red and processed meat consumption in patients who have recently completed treatment for bowel cancer.

Ethics approval required

Old ethics approval format

Ethics approval(s)

UCLH NHS Foundation Trust Ethics Committee, 14/10/2009, ref: 09/H0715/44

Study design

Multicentre non-randomised interventional pilot study

Primary study design

Health condition(s) or problem(s) studied

Topic: National Cancer Research Network; Subtopic: Colorectal Cancer; Disease: Colon, Rectum

Interventions

This is a feasibility study without a control group, therefore all participants will receive the same intervention. Participants will be provided with written information regarding the benefits of changes in physical activity, F&V, red and processed meat consumption following bowel cancer. They will then receive 6 personalised telephone consultations over the course of 3 months (1 call every 2 weeks). These sessions, based on self-regulation theory, will take into account baseline levels of each behaviour and introduce goal setting with the aim of gradually improving behaviour and a rate that is sustainable. Participants will also be educated regarding behaviour

change skills, such as self-monitoring and evaluation of behavioural goals. Participants will be given logbooks and a pedometer in order to record their behaviour.

Intervention Type

Behavioural

Primary outcome measure

Feasibility, measured on trial completion

Secondary outcome measures

All measured on trial completion:

1. Acceptability
2. Blood samples to measure vitamin C, E and plasma carotene
3. Change in physical activity
4. Fatigue
5. Fruit and vegetable consumption
6. Insulin-like growth factor 1 (IGF-1)
7. Physical function
8. Quality of life (Functional Assessment of Cancer Therapy-Colorectal [FACT-C])
9. Red and processed meat consumption

Overall study start date

01/04/2011

Completion date

29/07/2011

Eligibility**Key inclusion criteria**

1. Patients within 6 months of treatment completion for M0 colorectal cancer
2. Can speak and read in English
3. Aged over the age of 18 years but with no maximum age limit, either sex

Participant type(s)

Patient

Age group

Adult

Lower age limit

18 Years

Sex

Both

Target number of participants

Planned sample size: 30

Key exclusion criteria

1. Any contraindications preventing participation in unsupervised physical activity
2. Those who have ileostomy/colostomy bags

Date of first enrolment

01/04/2011

Date of final enrolment

29/07/2011
