Study information

Scientific Title

A prospective study aiming to measure the population burden of injuries in the United Kingdom

Study objectives

The UK Burden of Injuries Study is a prospective study which aims to measure the population burden of injuries in the UK. It is a mixed methods study with quantitative and qualitative components. Participants are recruited from injured people attending emergency departments or who have been admitted to hospital with injuries. Participants complete quality of life, health service utilisation and work limitation questionnaires at baseline, 1, 4 and 12 months post injury or until they have completely recovered. Study specific data on patterns of recovery by injury type are combined with population estimates of injury from computerised inpatient, emergency department and mortality data and extrapolated to estimate the UK Burden of Injuries, primarily utilising the Disability Adjusted Life Years (DALYs) approach.

Ethics approval required

Health condition(s) or problem(s) studied

Topic: Injuries and Accidents; Subtopic: Injuries and Accidents (all Subtopics); Disease: Injuries & Accidents

Interventions

The UKBOI Study was an observational study which combined prospectively collected data from an injured cohort with national and local mortality, inpatient and emergency department statistics and databases to estimate the UK burden of injuries. A total of 1517 injured individuals were recruited and followed up until recovery or to 1 year. Data were collected at baseline, 1, 4 and 12 months of follow up.

Follow up length: 12 months
Study entry: registration only

Phase

Not Applicable

Primary outcome measure

Change in health related quality of life from baseline (estimate of pre-injury status), measured using the EQ5D. Outcomes were measured at 1,4 and 12 months.

Secondary outcome measures

No secondary outcome measures

Overall study start date

01/09/2005

Completion date

20/11/2007

Eligibility**Key inclusion criteria**

1. Patients with an injury diagnosis identified in Emergency Departments
2. Male and female, lower age limit of 5 years

Participant type(s)

Patient

Age group
