### Scientific Title

### Study objectives

Patients with chronic kidney disease (CKD) mainly die from cardiovascular-related causes, with a mortality 20 times the risk of a general population. Although all the traditional risk factors are accountable, studies show that oxidative stress makes a particular contribution to the excessive cardiovascular risks. Oxidative stress promotes left ventricular hypertrophy (LVH) and causes endothelial dysfunction. LVH is known to be an independent predictor of cardiovascular events and studies have shown the survival benefits of regressing LVH. Allopurinol has been proven to be a potent antioxidant. Hence, this study looks to see if allopurinol would regress LVH and also improve endothelial dysfunction in patients with CKD.

### Ethics approval required

Old ethics approval format

### Ethics approval(s)

Tayside Committee on Medical Research Ethics A. Date of approval: 05/12/2007 (ref: 07/S1401/132)

### Study design

Randomised, double-blind, placebo-controlled trial.

### Primary study design

Interventional

## Study type(s)

Treatment

## Health condition(s) or problem(s) studied

Chronic kidney disease (CKD) and left ventricular hypertrophy (LVH)

### **Interventions**

Allopurinol 300 mg vs placebo once a day orally for 9 months

## Intervention Type

Drug

### Phase

Not Specified

# Drug/device/biological/vaccine name(s)

allopurinol

### Primary outcome(s)

Reduction in left ventricular hypertrophy at 9 months

### Key secondary outcome(s))

Reduction in endothelial dysfunction at 9 months

### Completion date

31/10/2009

# Eligibility

### Key inclusion criteria

- 1. Both males and females, age >18 years old and there is no upper age limit
- 2. Chronic kidney disease, Stage 3 (estimated glomerular filtration rate [GFR] 30-60 ml/min)
- 3. Echo left ventricular hypertrophy

### Participant type(s)

**Patient** 

### Healthy volunteers allowed

No

### Age group

Adult

### Lower age limit

18 years

### Sex

All

### Key exclusion criteria

- 1. Known cardiac failure with left ventricular ejection fraction (LVEF) <45%
- 2. Patients already on allopurinol
- 3. Patients who have gout
- 4. Patients with severe hepatic disease
- 5. Usual contraindications to magnetic resonance imaging (MRI), including any metal implants in the body and severe claustrophobia
- 6. Current immunosuppressive therapy (e.g., azathioprine, ciclosporin or cyclophosphamide), chlorpropamide, theophylline or 6-mercaptopurine
- 7. Malignancy or other life threatening disease
- 8. Pregnancy and lactating women
- 9. Patients unable to provide informed consent (e.g., learning difficulties)

### Date of first enrolment

15/01/2008

### Date of final enrolment

31/10/2009

## Locations

### Countries of recruitment

**United Kingdom** 

Scotland
