Study information

Scientific Title

Medical Research Council Trial of Immediate versus Deferred Treatment for Intracerebral Brain Tumours Presenting With Epilepsy

Study objectives

Not provided at time of registration

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Brain and Nervous System

Interventions

1. Group A: Immediate treatment with clinicians choice of one or more of surgery, radiotherapy or chemotherapy, plus best medical treatment
2. Group B: Deferred treatment, with best medical treatment only until intervention becomes clinically necessary

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Not provided at time of registration

Key secondary outcome(s)

Not provided at time of registration

Completion date

10/12/1993

Reason abandoned (if study stopped)

Participant recruitment issue

Eligibility**Key inclusion criteria**

1. Patients with a clinically definite history of epilepsy who have Computed Tomography (CT) and /or Magnetic Resonance (MR) imaging supporting a probable diagnosis of intracerebral tumour

2. Clinical picture, CT or MR imaging is unequivocal and allows exclusion of cerebral abscess or extra-axial tumour (meningioma)
3. No other medical condition likely to effect the feasibility of follow-up
4. No previous neurosurgery, radiotherapy or chemotherapy
5. No other previous or concurrent malignant disease, except non melanomatous carcinoma of the skin
6. Age >16

Participant type(s)

Patient

Healthy volunteers allowed

No
