Study information

Scientific Title

Study objectives

The purpose of this study is to test the hypothesis that repetitive Transcranial Magnetic Stimulation (rTMS) can attenuate the behavioural response to amphetamine in healthy volunteers.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Neurosciences, psychiatry

Interventions

rTMS versus sham application (placebo). Both groups receive methamphetamine.

Intervention Type

Drug

Phase

Not Specified

Drug/device/biological/vaccine name(s)

Methamphetamine

Primary outcome measure

Not provided at time of registration

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/03/1999

Completion date

01/03/2000

Eligibility

Key inclusion criteria

- 1. No significant current or past psychiatric disorder or substance misuse
- 2. No current physical illness

Participant type(s)

Patient

Age group

Adult

Sex

Both

Target number of participants

24

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

01/03/1999

Date of final enrolment

01/03/2000
