Study information

Scientific Title
Impact of pharmaceutical intervention in the treatment and quality of life of women with epilepsy: a randomised controlled pragmatic clinical trial

Acronym
IPHIWWE

Study objectives
Will the intervention of the pharmacist in the therapy of women with epilepsy to optimise treatment and improve their quality of life?

Ethics approval required
Old ethics approval format

Ethics approval(s)
Local medical ethics committee (Fundación Liga Central Contra la Epilepsia, sede Bogotá, LICCE, Acta 18/2009 Comité de Ética), 11/08/2009, ref: CEI-A1. Acta 18 de 2009

Study design
Randomised controlled pragmatic trial

Primary study design
Interventional

Study type(s)
Quality of life

Health condition(s) or problem(s) studied
Epilepsy

Interventions
This is a two-armed pragmatic trial. The intervention group will receive usual medical care and are additionally given pharmaceutical care, health education and therapeutic drugs monitoring for six months. The control group continued with standard medical care.

All the patients continued drug treatment prescribed by the physician. Questionnaire measures will be administered to all participants at the beginning of baseline recording and at the end of the study.

Intervention Type
Other

Phase
Not Applicable

Primary outcome(s)
Quality of Life in Epilepsy Inventory-31 (QOLIE-31). Questionnaire measures will be administered to all participants at the beginning of baseline recording and at the end of treatment (six months).

Key secondary outcome(s))
Questionnaire measures will be administered to all participants at the beginning of baseline recording and at the end of treatment (six months):
1. Liverpool Adverse Events Profile

2. Spanish Center for Epidemiologic Studies, Depression Scale
3. Drug related problems

Completion date
28/02/2011

Eligibility

Key inclusion criteria
1. Female, over 18 years
2. Diagnosis of epilepsy for more than a year
3. In treatment with antiepileptic drugs
4. Having at least one crisis in the last year
5. Ability to comply with the directions of the study

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Lower age limit
18 years

Sex
Female

Total final enrolment
182

Key exclusion criteria
1. Active major psychiatric disorder
2. Physical deficit (e.g., hemiplegia) or mental (e.g., mental retardation), preventing them from answering questionnaires
3. Drug/alcohol dependence
4. Involvement, earlier in the pharmaceutical care program of the institution

Date of first enrolment
03/05/2010

Date of final enrolment
28/02/2011
