Study information

Scientific Title

Acronym
INFLUX

Study objectives
The aim of the study is to evaluate the influence of dialysis membrane permeability on biological parameters that predict morbidity and mortality of hemodialysis patients with moderate chronic inflammation

Ethics approval required
Old ethics approval format

Ethics approval(s)
Consulting committee for the protection of people in biomedical research, Bordeaux A (Comité Consultatif pour la Protection des Personnes dans la Recherche Biomédicale [CCPPRB] de Bordeaux A) - number 2004/49, June 18, 2004.

Study design
Prospective, multicenter, randomised

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Study setting(s)
Not specified

Study type(s)
Not Specified

Participant information sheet

Health condition(s) or problem(s) studied
End-stage renal disease

Interventions
Hemodialysis treatment with high-flux versus low-flux dialysers of the same type of chemical composition

Intervention Type
Other

Phase

Not Specified

Primary outcome measure
Plasma concentration of C-reactive protein

Secondary outcome measures
Advanced glycation end products, carboxymethyl lysine, asymmetric dimethyl arginine, fibrinogen, albumin and prealbumin, phosphate

Overall study start date
10/02/2005

Completion date
31/12/2006

Eligibility

Key inclusion criteria
1. Medically stable end-stage renal disease patients on hemodialysis for 6 months or more
2. Age ≥18 years
3. C-reactive protein between 5 and 50 mg/l maximum one week before inclusion
4. Human immunodeficiency virus (HIV) and hepatitis C virus (HCV) serologies negative
5. Not under guardianship
6. AgHbs negative
7. Absence of vascular access thrombosis
8. Absence of clinically identifiable cause of chronic inflammation
9. Treatment in a dialysis unit providing water quality according to the European Pharmacopoeia
10. Statin medication allowed, but no introduction or modification during the study
11. Hemodialysis blood flow rates between 200 and 500 ml/min possible
12. Dialysis frequency 3-4 per week

Participant type(s)
Patient

Age group
Adult

Lower age limit
18 Years

Sex
Both

Target number of participants
180

Key exclusion criteria
1. Age >75 years
2. Known pregnancy
3. Severe comorbidities with life expectancy <1 year

4. Cancer except skin cancer
5. Severe digestive pathologies
6. Chronic inflammatory diseases
7. Medication interfering with nutritional or inflammatory status
8. Treatment or intention to treat with immunosuppressive medication
9. Dialysis dose Kt/V <1.2, and dialysis time <10 hours per week
10. Treatment with hemofiltration or hemodiafiltration
11. Participation in another study during the preceding 30 days
12. Physically or mentally disabled patients

Date of first enrolment
10/02/2005

Date of final enrolment
31/12/2006
