Study information

Scientific Title

Randomised controlled trial of complete bowel preparation vs distal bowel cleansing in the management of patients referred under fast track guidelines for colorectal cancer

Study objectives

What is preferable in the management of patients undergoing flexible sigmoidoscopy - complete bowel preparation or distal bowel cleansing?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Cancer: Colorectal

Interventions

1. Complete bowel preparation
2. Distal bowel cleansing

Intervention Type

Procedure/Surgery

Primary outcome(s)

1. Patient satisfaction
2. Bowel preparation efficacy

Key secondary outcome(s))

Not provided at time of registration

Completion date

01/06/2006

Eligibility

Key inclusion criteria

200 patients undergoing flexible sigmoidoscopy following fast track referral

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria

Inability to self-administer enema, diabetes mellitus (unless solely diet controlled)

Date of first enrolment

01/11/2003

Date of final enrolment

01/06/2006

Locations

Countries of recruitment

United Kingdom

England

Study participating centre
