Plain English summary of protocol

Background and study aims

Oral cancer is a rapidly evolving and aggressive disease, to which various population groups are exposed, being the sixth most common cause of cancer-related death worldwide.

Oral cancer is associated with multiple factors. Some of them are largely modifiable. They are habits and lifestyles that can become self-managed. Knowing different aspects of oral cancer could improve the attitudes and practices of health professionals, which can lead to early diagnosis.

The purpose of this study is to determine the efficacy of an educational intervention in the knowledge, attitudes and practice of dentists and dental students about oral cancer.

Who can participate?

Dentists that teach at dental schools in Colombia and dental students.

What does the study involve?

Participants will be randomly allocated to receive an educational intervention website or leaflet, or no intervention. Knowledge, attitudes and practice are assessed before the intervention and 2 months after.

What are the possible benefits and risks of participating?

None

Where is the study run from?

Universidad Santo Tomás campus Floridablanca (Colombia)

When is the study starting and how long is it expected to run for?

August 2021 to August 2023

Who is funding the study?

Colgate-Palmolive (USA)

Asociación Colombiana de Facultades de Odontología, ACFO (Colombia)

Who is the main contact?

Gloria Aranzazu, gloria.aranzazu@ustabuca.edu.co

Study information

Scientific Title

Efficacy of a health intervention in oral cancer aimed at dentists and dental students

Acronym

ORCAKNOW

Study objectives

The intervention groups will have better knowledge, attitude and practice scores (KAP) than the control group

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approved 25/08/2021, Santo Tomás University Bucaramanga-Colombia Research Ethics Committee (Cra 18 n° 9-27 Bucaramanga-Colombia; no telephone number provided; comite.etica@ustabuca.edu.co), ref: Código 0161-2021

Study design

Multicenter interventional randomized controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Health condition(s) or problem(s) studied

Oral cancer knowledge, attitude and practice in dentists and dental students.

Interventions

Group 0. No intervention

Group 1. Intervention website

Group 2. Intervention leaflet

Participants will be randomized in to the groups by aleatory number list, 66 participant by each of 10 centers (dental school or hospital)

33 dentist and 33 clinical students (11 dentist and student will be include in each group).

Time between initial KAP evaluation and final, will be 2 months.

Intervention Type

Other

Primary outcome measure

1. Knowledge measured using questionnaire score before and 2 months after the intervention.
2. Attitude measured using questionnaire score before and 2 months after the intervention
3. Practice measured using questionnaire score before and 2 months after the intervention

Secondary outcome measures

Demographic information measured by questionnaire at initial recruitment:

1. Age (years)
2. Gender
3. Occupation (dentist or student)
4. Degree (student, general dentist or specialist)
5. City
6. University
7. Years of dental practice

Overall study start date

25/08/2021

Completion date

01/08/2023

Eligibility

Key inclusion criteria

1. Dentist who teaches at a dental school in Colombia
2. Dental student in clinical practice (semester 6-10) in Colombia

Participant type(s)

Health professional

Age group

All

Sex

Both

Target number of participants

10 clusters and 66 participants in each cluster

Total final enrolment

598

Key exclusion criteria

Dentist with oral medicine or oral pathology practice

Date of first enrolment

01/06/2022

Date of final enrolment

30/08/2023
