Study information

Scientific Title

A randomised controlled parallel group study of a culturally focused cardiac rehabilitation programme - an efficacy trial (CADISAP)

Study objectives

To determine whether a culturally focused cardiac rehabilitation service for South Asians would be superior to conventional rehabilitation programmes.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled parallel group study

Primary study design

Interventional

Secondary study design

Randomised parallel trial

Study setting(s)

Not specified

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Cardiovascular

Interventions

Focused cardiac rehabilitation service for South Asians vs conventional rehabilitation

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Quality of life data from the SF-36 MOS, uptake and compliance in the programme are the main outcome measures to determine the differences between the two arms of the trial.

Secondary outcome measures

Not provided at time of registration

Overall study start date

02/02/2004

Completion date

01/09/2005

Eligibility

Key inclusion criteria

150 patients

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

150

Key exclusion criteria
