Study information

Scientific Title

Acronym

LDD (Liver Dissection Devices)

Study objectives

Evaluate the surgical safety and the costs of different commercially available liver dissection devices.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethics approval received from the local Ethical Committee of the University of the Saarland in March 2005 (ref: 47/05)

Study design

Single-centre, randomised, single-blind study

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Primary or secondary hepatic malignancy

Interventions

Liver resection with three different liver resection (dissection) devices:

1. Selector® (Erbe, Tübingen, Germany)
2. Helix HydroJet® (Erbe, Tübingen, Germany)
3. Dissecting Sealer 3.0® (TissueLink Medical, Dover, NH, USA)

Total duration of follow-up in all treatment arms was until discharge from hospital, no further follow up was performed.

Intervention Type

Device

Phase

Not Specified

Primary outcome measure

1. Blood loss
2. Intraoperative and postoperative blood transfusions
3. Dissection time
4. Resection area
5. Dissection speed
6. Blood loss per dissected area
7. Post-operative International Normalised Ratio (INR)
8. Post-operative partial thromboplastin time (PTT)
9. Post-operative bilirubin levels
10. Morbidity (bleeding, bile fistula, cholangitis, liver abscess, pleura effusion, pneumonia, cardiac complications)
11. Intensive Care Unit (ICU) stay
12. Hospital stay

Primary and secondary outcomes were measured during the hospital stay.

Secondary outcome measures

1. Mounting time
2. Costs of devices (system costs)
3. Maintenance costs
4. Costs of additional haemostyptic items
5. Costs of staplers and magazines

Primary and secondary outcomes were measured during the hospital stay.

Overall study start date

01/09/2003

Completion date

30/06/2005

Eligibility**Key inclusion criteria**

All patients undergoing liver resection for primary or secondary hepatic malignancy of any age and gender.

Participant type(s)

Patient

Age group

Not Specified

Sex

Both

Target number of participants

96

Key exclusion criteria

1. Cirrhosis or cholestasis (serum bilirubin greater than 25 mg/dl)
2. Prior chemotherapy (within 6 months) and multiple liver tumours

Date of first enrolment

01/09/2003

Date of final enrolment

30/06/2005
