Study information

Scientific Title
An integrated Management of Malaria and Pneumonia in children under five at home and community level

Acronym
HCMMP

Study objectives
Prompt use and compliance with efficacious treatment for both malaria and pneumonia provided at home and community level reduces under five morbidity and mortality significantly and is more cost effective than giving antimalarials alone.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Uganda National Council for Science and Technology approved on the 17th August 2005 (ref: HS 72)

Study design
Cluster randomised controlled trial

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Health condition(s) or problem(s) studied
Malaria and pneumonia

Interventions
The intervention arm has combined home and community malaria and pneumonia treatment where pre-packaged drugs (anti-malarial and antibiotics) are distributed through trained community medicine distributors. Children who present with fever are given antimalarials (Coartem®) and when they in addition have rapid breathing, they are given antibiotics (amoxycillin).

For the control arm, antimalarials (Coartem®) are distributed by trained community medicine distributors to the children who present with fever. Those who present with rapid breathing are referred to health facilities. The difference between the intervention and control arms is that in

the intervention, there is community distribution of antibiotics in addition to the antimalarials while in the control, there is only distribution of antimalarials alone.

Intervention Type
Other

Phase
Not Applicable

Primary outcome measure
Mortality in children under five

Secondary outcome measures
Determined at the end of the two year period:
1. Mortality preceded by an acute febrile illness
2. Severe anaemia
3. Cost-effectiveness of the interventions
4. Equity analysis

Overall study start date
02/12/2009

Completion date
01/12/2011

Eligibility

Key inclusion criteria
Children aged 4 to 59 months

Participant type(s)
Patient

Age group
Child

Lower age limit
4 Months

Upper age limit
59 Months

Sex
Both

Target number of participants
11,000 children monitored over two years

Key exclusion criteria
Children below 4 months of age or those above 59 months old

Date of first enrolment
02/12/2009

Date of final enrolment
01/12/2011

Locations

Countries of recruitment
Uganda
