Study information

Scientific Title

Effectiveness of a preventive coaching programme for employees with a high risk of sickness absence due to psychosocial health complaints

Study objectives

1. A screening instrument, consisting of predictive factors, can be used to predict which employees are at risk for sickness absence due to psychosocial health complaints
2. Coaching is effective in preventing sickness absence and improving general well-being

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethics approval received from the local medical ethics committee

Study design

Randomised, active controlled, parallel group trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Treatment

Participant information sheet**Health condition(s) or problem(s) studied**

Sickness absence due to psychosocial health complaints

Interventions

The intervention group will receive the coaching programme. The central guideline of preventive coaching is to provide insight in the situation of the employee, improve his notion that he is responsible for his career and life and to improve his ability to manage the changes.

The programme consists of nine meetings between the employee and the coach. In two of the meetings, the supervisor of the employee will participate.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

The primary outcome measure is absenteeism. Data will be gathered through record linkage to the company's sick leave registry systems and by use of questionnaires filled in by the employees.

Secondary outcome measures

Secondary outcome measures are:

1. Motivation
2. Fatigue
3. Burnout
4. Need for recovery
5. General health
6. Coping
7. Medical consumption

Overall study start date

01/11/2004

Completion date

31/10/2006

Eligibility**Key inclusion criteria**

By means of the developed screening instrument, employees from participating companies who are at increased risk of sickness absence due to psychosocial health complaints will be identified and included in the trial.

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

200

Key exclusion criteria

Employees will be excluded from participation if they:

1. Were fully or partially on sick leave
2. Suffer from chronic psychosocial health complaints at baseline

- 3. Have more than one contract
- 4. Are pregnant or on maternity leave
