# Study information

## Scientific Title

GP-initiated preconception counselling

## Acronym

Parents to Be

## Study objectives

At least 20% of the pregnancies in the Netherlands end in an adverse pregnancy outcome (spontaneous abortion, preterm birth, low birth weight, perinatal death, congenital anomaly). Information on risk factors before pregnancy together with preventive measures (preconception counselling) will lead to behavioural changes and thus to reduced adverse pregnancy outcomes.

## Ethics approval required

Old ethics approval format

## Ethics approval(s)

Ethics approval received from the Medical Ethics Committee of Leiden University Medical Centre.

## Study design

Randomised controlled trial

## Primary study design

Interventional

## Secondary study design

Randomised controlled trial

## Study setting(s)

Not specified

## Study type(s)

Treatment

## Participant information sheet

## Health condition(s) or problem(s) studied

Adverse pregnancy outcome

## Interventions

In the intervention group women 18 - 40 years received an invitation for preconception counselling. When interested and contemplating a pregnancy within a year a risk-assessment questionnaire was used to systematically assess risks of the couple. Counselling was provided based on risks identified as well as risks which apply to all women.

The control group received care as usual.

## Intervention Type

Other

**Phase**

Not Specified

**Primary outcome measure**

The effect of GP-initiated preconception counselling (PCC) on adverse pregnancy outcome (spontaneous abortion, preterm birth, low birth weight, perinatal death, congenital anomaly).

**Secondary outcome measures**

1. Evaluation of womens knowledge of risk factors for the foetus and the influence of PCC on this knowledge
2. Prevalence of risk factors
3. Response to invitation of PCC
4. Anxiety induction by invitation or counselling
5. Satisfaction with counselling
6. Influence of PCC on risk-reducing behavior
7. GP satisfaction with the systematic PCC program and barriers for implication

**Overall study start date**

09/01/2000

**Completion date**

31/12/2005

**Eligibility****Key inclusion criteria**

Women aged 18 - 40 years.

**Participant type(s)**

Patient

**Age group**

Adult

**Lower age limit**

18 Years

**Sex**

Female

**Target number of participants**

4800

**Key exclusion criteria**

1. Completed family
2. Uterus extirpation
3. Sub-fertility or infertility
4. Insufficient understanding of Dutch
5. Adverse social circumstances

**Date of first enrolment**

09/01/2000

**Date of final enrolment**

31/12/2005
