Study information

Scientific Title

Study objectives

Does antibiotic prophylaxis reduce post PEG sepsis compared to placebo in a cohort of British district general hospital patients?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Double blind prospective randomised controlled trial

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Injury, Occupational Diseases, Poisoning: Post percutaneous endoscopic gastrostomy sepsis

Interventions

- 1. Antibiotic
- 2. Placebo

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

One week post procedure, sepsis present (graded) or sepsis free.

Key secondary outcome(s))

Not provided at time of registration

Completion date

31/12/2005

Eligibility

Key inclusion criteria

200 patients referred for PEG insertion.

Participant type(s)

Patient

Healthy volunteers allowed

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

01/08/2001

Date of final enrolment

31/12/2005

Locations

Countries of recruitment

United Kingdom

England
