Plain English summary of protocol

Background and study aims

Contact lenses are small prescription lenses, worn in "contact" with the eye. They are designed to correct eyesight and maintain eye health.

The aim of this study is to determine the acceptance and the vision performance of Miru multifocal contact lenses compared with 1-Day Acuvue® Moist contact lenses.

Who can participate?

Adults who are at least 40 years old and who have healthy eyes and are current multifocal contact lens wearers.

What does the study involve?

Each participant attends the clinic on three occasions. At the first visit after being screened and enrolled in the study, their eyes are examined and they are fitted and dispensed with one of the two study contact lenses (which lens type is used first is randomly determined like tossing a coin). The second visit takes place 1 week after the first, during that visit the contact lens which the participant wore are assessed. Then, the participant is fitted and dispensed with the other contact lens type, which they wear for 1 week. At the third and final visit, the contact lenses that have been worn are assessed and the participant is discharged from the study.

What are the possible benefits and risks of participating?

The participants will have the opportunity to try two different types of multifocal contact lenses which they may prefer to their own multifocal contact lenses and at a later date may decide to opt for these lenses. The two contact lens types are CE marked and therefore the risks are no different to them wearing their own contact lenses.

Where is the study run from?

Ocular Technology Group - International Research Clinic (UK)

When is the study starting from and how long is it expected to run for?

August 2019 to December 2020

Who is funding the study?
CooperVision Inc (USA)

Who is the main contact?
Deborah Moore
dmoore@otg.co.uk

Study information

Scientific Title
Miru multifocal contact lens performance and acceptance assessment

Study objectives
The overall visual satisfaction and binocular visual performance with Miru multifocal will not be inferior to that of 1 DAY ACUVUE Moist multifocal.

Ethics approval required
Old ethics approval format

Ethics approval(s)

Approved 17/12/2019, North West - Preston Research Ethics Committee (Barlow House 3rd Floor, 4 Minshull Street, Manchester, M1 3DZ, UK; +44 (0)207 104 8056; preston.rec@hra.nhs.uk), ref: 19/NW/00713

Study design

Prospective double-masked randomized cross over pilot feasibility study

Primary study design

Interventional

Study type(s)

Other

Health condition(s) or problem(s) studied

Presbyopia vision correction using multifocal contact lenses

Interventions

Each participant attends the clinic on three occasions.

At the first visit after being screened and enrolled in the study, their eyes are examined and they are fitted and dispensed with one of the two study contact lenses (chosen at random). The randomisation process is 1:1 randomisation using a computerised program.

The second visit takes place 1 week after the first, during that visit the contact lens which the participant wore are assessed. Then, the participant is fitted and dispensed with the other contact lens type, which they wear for 1 week.

At the third and final visit, the contact lenses that have been worn are assessed and the participant is discharged from the study.

Intervention Type

Device

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Miru multifocal contact lenses, 1 DAY ACUVUE Moist multifocal contact lenses

Primary outcome(s)

Overall binocular vision satisfaction measured on a 100 point Visual Analogue scale at the end of the wearing period 7 +2/-1 days of wear.

Key secondary outcome(s)

Overall binocular visual performance measured as the mean of the distance and near LogMar visual acuity after 7 +2/-1 days of wear.

Completion date

14/12/2020

Eligibility

Key inclusion criteria

1. At least 40 years old
2. Have read and understood the Participant Information Sheet in English
3. Have read, signed and dated the Informed Consent
4. Best corrected visual acuity of at least 20/25 in each eye
5. Have normal eyes with the exception of the need for visual correction
6. Current multifocal soft contact lens wearer
7. Spectacle refraction:
Distance: Sphere: -6.00D to + 4.00D
Astigmatism: 0.00D to -0.75D
Near Addition: +0.75D to +2.50D
8. Be willing and able to adhere to the instructions set in the clinical protocol and maintain the appointment schedule

Participant type(s)

Healthy volunteer

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Total final enrolment

27

Key exclusion criteria

1. Currently wearing study contact lenses
2. Ocular anterior segment infection, inflammation, abnormality, or active disease that would contraindicate contact lens wear
3. Newly prescribed use of some systemic or ocular medications for which contact lens wear could be contraindicated as determined by the investigator
4. Monocular participants (only one eye with functional vision) or participants fit with only one lens
5. Any moderate or severe ocular condition observed during the slit-lamp examination at the enrolment visit
6. History of herpetic keratitis, ocular surgery or irregular cornea
7. Known pregnancy or lactation during the study period
8. Enrolment of the investigator or his/her staff, family members of the investigator, family members of the investigator's staff, or individuals living in the households of these individuals

Date of first enrolment
