Study information

Scientific Title

A randomised parallel group study to compare transarterial particle embolism with percutaneous ethanol injection in patients with unifocal, small (<3cm), non-resectable hepatocellular carcinoma

Study objectives

Which is the best treatment in terms of survival of patients diagnosed with unresectable unifocal hepatocellular carcinoma (HCC) less than 3 cm in diameter treated with percutaneous ethanol injection or transarterial particle embolisation?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised parallel-group study

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Treatment

Participant information sheet

Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied

Cancer: Liver

Interventions

Percutaneous ethanol injection or transarterial particle embolisation

Intervention Type

Drug

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Ethanol

Primary outcome measure

Survival of patient after treatment of unresectable, unifocal, small (3 cm) hepatocellular carcinoma

Secondary outcome measures

Not provided at time of registration

Overall study start date

31/07/2003

Completion date

31/07/2006

Eligibility

Key inclusion criteria

Not provided at time of registration

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

185

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

31/07/2003

Date of final enrolment

31/07/2006
