Study information

Scientific Title

A randomised parallel group study to compare transarterial particle embolism with percutaneous ethanol injection in patients with unifocal, small (<3cm), non-resectable hepatocellular carcinoma

Study objectives

Which is the best treatment in terms of survival of patients diagnosed with unresectable unifocal hepatocellular carcinoma (HCC) less than 3 cm in diameter treated with percutaneous ethanol injection or transarterial particle embolisation?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised parallel-group study

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Cancer: Liver

Interventions

Percutaneous ethanol injection or transarterial particle embolisation

Intervention Type

Drug

Phase

Not Applicable

Drug/device/biological/vaccine name(s)

Ethanol

Primary outcome(s)

Survival of patient after treatment of unresectable, unifocal, small (3 cm) hepatocellular carcinoma

Key secondary outcome(s))

Not provided at time of registration

Completion date

31/07/2006

Eligibility

Key inclusion criteria

Not provided at time of registration

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria
