Study information

Scientific Title

Remote ischaemic preconditioning in patients undergoing liver surgery

Study objectives

To study the effects of remote ischaemic preconditioning on liver functions following liver resection or transplantation. To determine whether a brief period of leg ischaemia will reduce ischaemia reperfusion (IR) injury to the liver during liver surgery for liver cancers and liver transplantation.

On 13/10/2014 the anticipated end date was changed from 30/06/2004 to 01/09/2015.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Other

Health condition(s) or problem(s) studied

Surgery: Liver

Interventions

Blind randomised controlled study

Intervention Type

Procedure/Surgery

Phase

Not Applicable

Primary outcome(s)

Does IPC reduce free radical generation and prevent activation of neutrophils observed during IR?

Key secondary outcome(s))

Not provided at time of registration

Completion date

01/09/2015

Eligibility

Key inclusion criteria

48 patients with 24 controls for each category (48 controls in all)

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Other

Sex

All

Key exclusion criteria

Does not match inclusion criteria

Date of first enrolment

20/12/2002

Date of final enrolment

01/09/2015

Locations

Countries of recruitment

United Kingdom

England
