Study information

Scientific Title

An analysis of the effect of photographic intervention on medical dialogue within pain consultations: an exploration of photographic portraiture with patients and clinicians from oral and dental medicine

Acronym

Face2face

Study objectives

Following the success of previous work by the investigators (and colleagues) into the usefulness of developing a visual language for pain, this research will investigate in greater depth the effect of photographic intervention into doctor-patient dialogue. It will also investigate the implications of the difficulty for facial pain patients of expressing and communicating pain using the normal canvas - i.e., the face - when the face itself is so frequently unable to communicate pain because of its own pain. The resultant schism in communication with the other will be explored through an exploration of photographic portraiture in a variety of ways. The results will be exhibited in hospital and public gallery spaces and disseminated within professional journals, patient support networks and journals, student teaching and via lectures at professional conferences and public forums. The project is made up of three main strands.

Ethics approval required

Old ethics approval format

Ethics approval(s)

MREC approved, 01/07/2009, ref: 09/H0801/51

Study design

Single-centre non-randomised observational diagnosis qualitative study

Primary study design

Interventional

Study type(s)

Diagnostic

Health condition(s) or problem(s) studied

Topic: Oral and Gastrointestinal; Subtopic: Oral and Gastrointestinal (all Subtopics); Disease: Oral & Dental

Interventions

Visual images of art created by the patients will be used to improve quality of consultation and to assess a patient's journey through treatment.

Follow-up length: 36 months

Study entry: other

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

Images at the start of treatment and at the end of treatment

Key secondary outcome(s)

Not provided at time of registration

Completion date

01/08/2011

Eligibility

Key inclusion criteria

1. Patients with facial pain
2. Clinicians working with facial pain willing to work with images
3. Male and female participants

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

All

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

06/08/2009

Date of final enrolment

01/08/2011
